Part Number VKB3Z-13E754-A

### INTRODUCTION

The Ford Ranger Bed Light System consists of (4) LED Lamps, linked together and activated via a capacitive touch switch integrated into the lens of each lamp. An external Switch is NOT required. The harness is designed to source constant 12 Volt power direct from the vehicle's battery.

### GENERAL OPERATION

The system is activated by touching the lens of ANY of the connected lamps. This will illuminate all (4) lamps simultaneously. Proper operation calls for two finger contact for 1.5 to 2 seconds. This helps prevent unwanted activation and false triggers caused by rain, water or other debris.

### product specification

RATED VOLTAGE	12 VOLTS
OPERATING VOLTAGE RANGE	9-16 VOLTS
BRIGHTNESS	70 LUX AT .5M
POWER CONSUMPTION	1.8 WATT @ 12 VOLTS
SEAL RATING	IP67
OPERATING TEMPERATURE	-40°C - +85°C
CURRENT DRAW	.3 MILLIAMPS PER LAMP
